

Proselectall Interface for AHUI-Selection programs

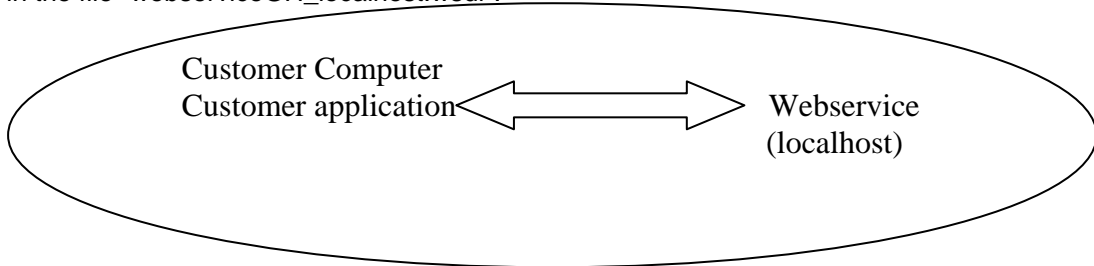

Our fan selection program Proselectall provides the AHU programs with an interface implemented as a webservice. . The communication is based on XML. The customers could use this webservice following

- a) as a webservice. In this case, the customers programs send a request to the webservice. The webservice answers with the result. The webservice is implemented according the "SOAP" standard. The Proselectall webservice is defined in the file "webserviceGH.wsdll" The customer could use the webservice installed at our webserver.
