

# Centrifugal Fans

double inlet with direct drive  
forward curved blades

Issue 1.2  
June 2012

**NICOTRA||Gebhardt**  
fan|tastic solutions

# The overall picture will decide

## Complete systems by Nicotra Gebhardt

Depending on the model of the fan, the efficiency grade "N" set in accordance with the ErP Directive must be achieved from 2013 and 2015 respectively.

Efficiency grade "N" to ErP-Directive

Year	Centrifugal fans with backward curved blades			Centrifugal fans with forward curved blades		
	without housing static	with housing static	total	with housing static	total	

Nicotra Gebhardt can supply complete systems in all product categories which meet the ErP requirements. We offer highly efficient fan systems

- ▶ with matching components and "high efficiency drives" – belt and direct drive.
- ▶ with integrated or external control to regulate speed.
- ▶ with IEC standard motors (IE2) or internal rotor motors with brushless DC technology.
- ▶ and with AC external rotor motors or brushless DC external rotor motors.

The efficiency grade designates a parameter in the calculation of the target energy efficiency of a fan depending on the electric input power when operating at the optimal energy efficiency point. The figure of parameter "N" corresponds to the target energy efficiency with a power of 10 kW.

**To make the selection easier for our customers, we offer complete systems as defined by the ErP Directive!**

In order to compare the systems, the total efficiency  $\eta_e$  of the fan without speed regulation is considered.

$\eta_e$  = Total efficiency  
 $P_{u(s)}$  = Fan gas power when operating at the optimal energy efficiency point  
 $P_e$  = Electric input power when operating at the optimal energy efficiency point

If the system has speed regulation, it will be taken into account with the "part load compensation factor"  $C_c$  (see below):

$P_{ed}$  = Input power of speed regulator when operating at the optimal energy efficiency point  
 $C_c$  = part load compensation factor

- ▶ without speed regulation:  $C_c = 1$
- ▶ with speed regulation  $P_{ed} \geq 5$  kW:  $C_c = 1.04$
- ▶ with speed regulation  $P_{ed} < 5$  kW:  $C_c = -0.03 \ln(P_{ed}) + 1.088$

In order to take the speed regulation into account via the part load compensation factor  $C_c$ , the following mathematical losses arise in accordance with the formula prescribed by ErP for the following typical motor powers:

- ▶  $P_{ed} = 4.00$  kW:  $C_c = 1.05$  (5 %)
- ▶  $P_{ed} = 2.20$  kW:  $C_c = 1.06$  (6 %)
- ▶  $P_{ed} = 0.75$  kW:  $C_c = 1.10$  (10 %)

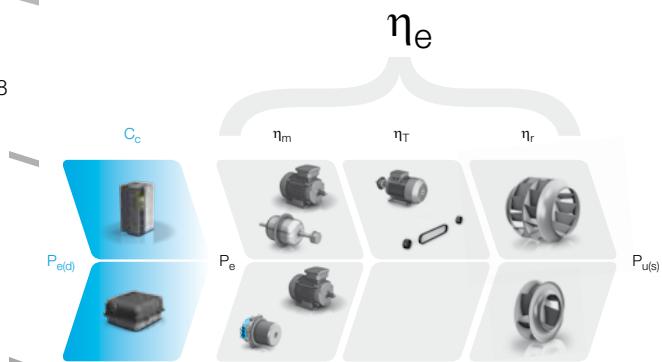

## Building blocks for best values

Thanks to the decades-long experience of Nicotra Gebhardt all the components of our fans contribute to their high performance.

Impellers and blades are optimised for turbulence and therefore particularly efficient. An example: With the latest development, the RLM Evo impeller, the free-running centrifugal fans of Nicotra Gebhardt achieve system efficiency grades never reached before.

In addition, the brushless DC drives which Nicotra Gebhardt offers for its direct drive fans improve the system efficiency grades.

**The fan technology of Nicotra Gebhardt delivers highly efficient systems for all applications.**

# proSELECTA II

## Simple and reliable selection

proSELECTA II is a technical selection program that allows you to configure your own individually designed fan. It provides you with the opportunity to choose from the entire range of fan types and their associated options.

The result from proSELECTA II is the provision of all the technical data for your fan, including sound level data, dimension specifications and accessories. Apart from that, as a registered user, your purchase prices are provided. Additionally fully dimensioned drawings in dxf format are available, which can be downloaded and transferred straight into your CAD system.

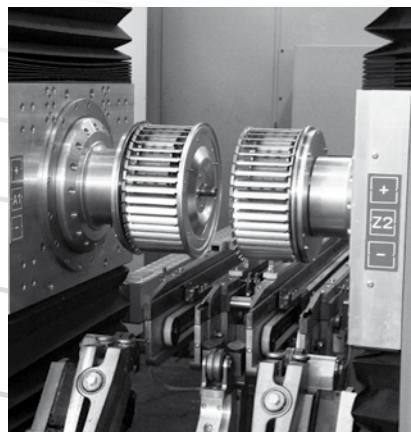

So that you can be sure. Models and options that are technically not permissible, are automatically excluded in proSELECTA II. So there is no chance that you will configure a "wrong" device option.

You can register as a proSELECTA II user with us, which enables us to offer you faster order processing. What this means for you is:

- ▶ The complete configuration of your fan with its associated system accessories and belt drive layout.
- ▶ The possibility to produce fans that operate via a frequency inverter.
- ▶ The option of saving your own fan configuration on our server.
- ▶ The opportunity to modify your saved configuration, even over the phone to your Nicotra Gebhardt representative.

## Nicotra Gebhardt technologies like ...

Automated manufacture of compact scroll and impeller with forward curved blades

Own motor production for optimal tuning of motor and fan!

Technical  
Description

# The best fan for your application!

## DDM range – direct driven fans

Direct driven centrifugal fans of DDM range with forward curved impeller directly mounted on the external rotor motor are the ideal solution for your applications in the HVAC business.

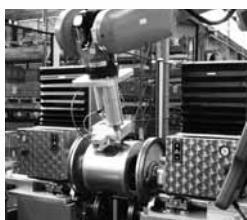

The fact of manufacturing by ourselves each fan component – the casing, the impeller and motor – enables us to create fans that perfectly meet the requirements of high performances and low power consumptions.

The wide range of different versions and motor types allows you to find the fan exactly matching what you really need.

You anyway get the generally recognized advantages of the direct drive technology :

- ▶ **Maintenance free**
- ▶ **No transmission losses**
- ▶ **Long fan life time**
- ▶ **High reliability**
- ▶ **Low operating costs**

And, more, all the additional product advantages of the DDM range are at your fingertips!

### Compact casing

Aerodynamically optimized in terms of both airflow and design, scrolls are made of galvanized steel and automatically assembled using an innovative procedure, providing a sturdy and long-lasting product.

- ▶ **without welding points for no corrosion troubles**
- ▶ **high precision manufacturing process for high quality product**

### Real forward curved impeller

The impeller has been optimized for the best efficiency, match to the special motor features.

We manufacture the high performance impellers through a highly – automated and innovative production process.

- ▶ **low noise level**
- ▶ **low power consumption**

### Optimized external rotor motor

The fan impeller is directly mounted on the motor thus providing efficient motor cooling by the fan airflow.

Motor speed can be adjusted either by the use of transformers and TRIAC regulators. Motors are generally fitted with thermal protector for protection against overheating.

- ▶ **high reliability and efficiency**
- ▶ **wide range of operative conditions**

### Vibration isolation

The vibration isolation pads of the motor shaft ensures a very low noise during fan operation and no transmission of noise and vibrations to the other parts of the fan, making installation more quiet and comfortable.

- ▶ **low noise level**
- ▶ **no noise and vibrations transmitted to the surrounding structures**

### Easy electrical connection

All fans could be provided with connection box, terminal block or loose cable. A wiring diagram sticker, placed on each fan, describes the correct electrical connection.

- ▶ **fast and easy wiring**
- ▶ **safe operation**

## DDM range

This kind of fans are specially conceived for use in dust-free environments, at temperatures up to +40 °C, or higher on selected models.

The performance data have been obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

## The variety of DDM

We have the right fan for all your application! Many different sizes, versions and motor types are available in the DDM range.

- ▶ Impeller size (width and diameter) up to 15"
- ▶ Speed variation either by step-transformers or stepless
- ▶ External rotor motor with integrated thermal protector
- ▶ Fan models suitable for 60 Hz supply are available
- ▶ Air Flow up to 12,000 m<sup>3</sup>/h
- ▶ Static pressure up to 800 Pa

# DDM

## Specifications

### High performance centrifugal fan DDM

Double width, double inlet (DWI), direct driven forward curved blades fan. Lap-jointed scroll of galvanized steel (EN 10142) assembled through a high technology roller-lock seaming for fan sizes 7 inches and larger, spot-welded scroll of Sendzimir galvanized steel for smaller sizes. Straight cut off plate at fan outlet. Impeller with forward curved blades of galvanized steel, directly mounted on an "External Rotor" motor for optimal motor cooling and no transmission losses. Open (IP10/IP20) or closed (IP32/IP44/IP54/IP55) motor frame; Motors may be single or three-phase, single or multiple speed, speed-adjustable by voltage regulation through transformers or TRIAC regulators. Motors suitable for use at 50 Hz or 60 Hz are available. Built-in thermal protection devices either in series or wired out is standard fit. Maintenance free self-aligning ball bearings, vibration isolation pads. Impeller dynamically balanced in class 6.3, according to ISO 1940. Different fan options and accessories, motor types and sizes available - see technical data.

## Accessories

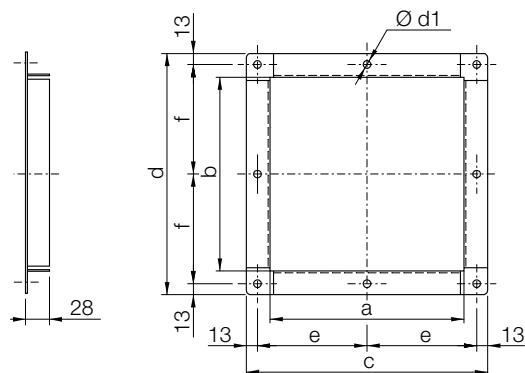

All options and accessories must be specified separately.  
Please take the technical data and dimensions from the corresponding page of the catalogue.

### Flanges

Made from galvanized or painted steel, to connect ducts and system components to the fan outlet side.

## Terminal box

Each fan is equipped with a loose cable, a terminal strip or a terminal box (see specific catalog data for details)

The terminal box is commonly fitted to the side plate of the fan. It is made of plastic material and provided with cable glands. A schematic diagram, always provided with the fan, displays the proper electrical connection.

**Dimensions** in mm, Subject to change.

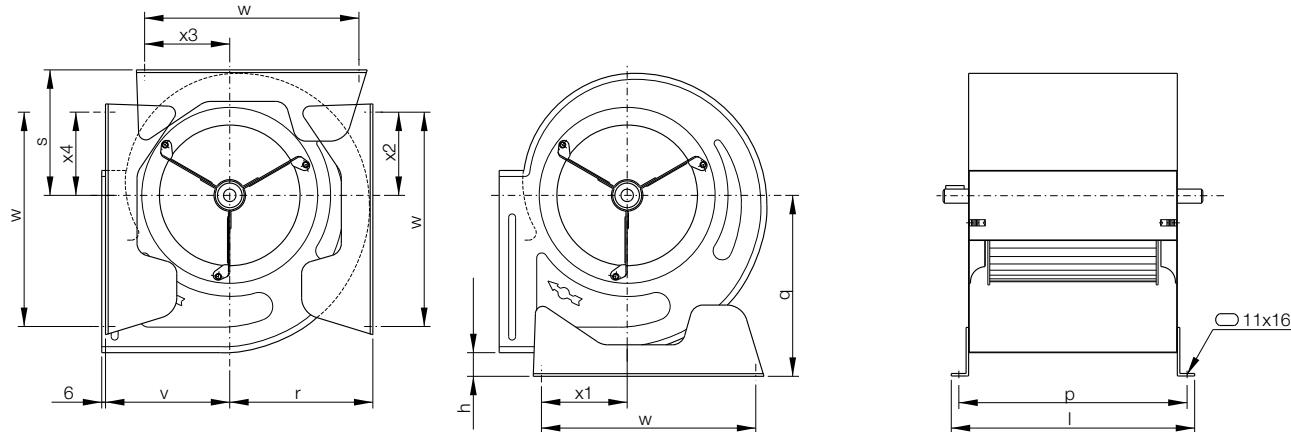

# Fittings / Accessories

## Mounting feet

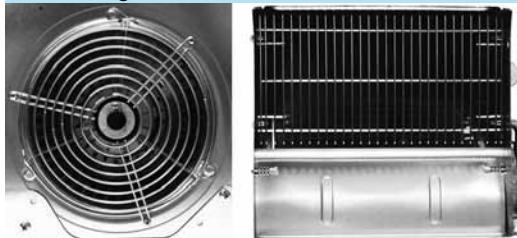

Feet made from galvanized steel, either mounted or loose, enable the fan to be installed with a 0, 90 and 270 orientation.

## Dimensions in mm, Subject to change.

## Protection guards

Inlet or outlet protection guards are available as accessories from size 7/7 to 10/10, for bigger sizes and for further information, please contact Nicotra Gebhardt technical department.

## Increased corrosion protection

Nicotra Gebhardt fans are provided – as a standard equipment – with a highly efficient corrosion protection but, in the event of extremely high corrosion risk, additional corrosion protections might be required.

Following to the application and corrosion stress conditions, special coatings of various types and thickness can be supplied on request.

# Fittings / Accessories

## RVM - Single-phase manual regulator

Electronical speed control unit producing a stepless modulated output voltage for fans with speed controlled single phase motors

### Execution

Casing made of impact resistant plastic.

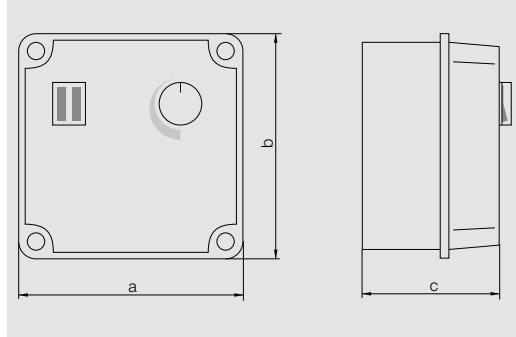

### Function

The speed controller is equipped with an EMC-filter, a turning knob for speed control starting at a fixed rpm-value, an operation indicating light (RVM 5I, RVM 9I, RVM 20I), and an internal fuse protection.

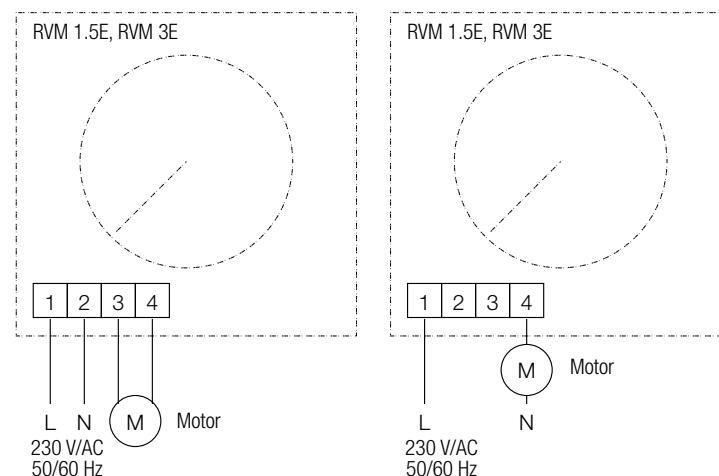

### Technical Data

	Article number	Nominal voltage V	Max. current A	Frequency Hz	Protection class	Temperature range °C	Fuse	a mm	b mm	c mm

## RVT - Three-phase manual regulator

Electronical speed control unit producing a stepless modulated output voltage for fans with speed controlled three phase motors.

### Execution

Plastic casing with cast aluminium base plate, IP54 protection class.

### Function

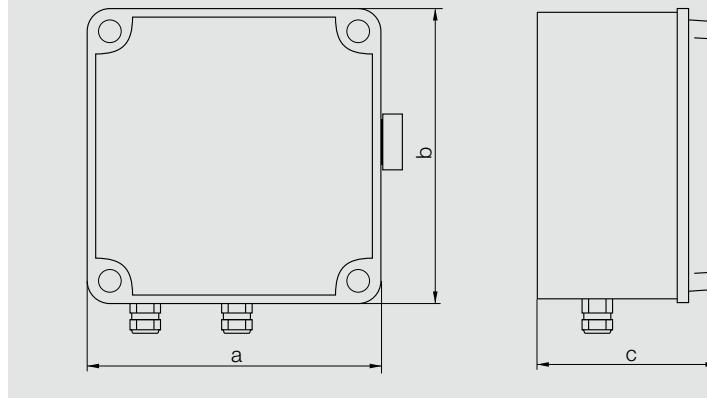

With the control unit a setting of the minimum speed value as well as the maximum speed is provided. It is equipped with an internal overload protection and, as an option, there are contacts provided for connecting the thermo contacts (PTO) in the motor winding.

Following to switching the unit on, the controller automatically is operating a softstart of the motor up to the speed which is set by the position of the potentiometer. By turning the potentiometer the motor speed will be changing due to driving it with a varying voltage through phase cutting.

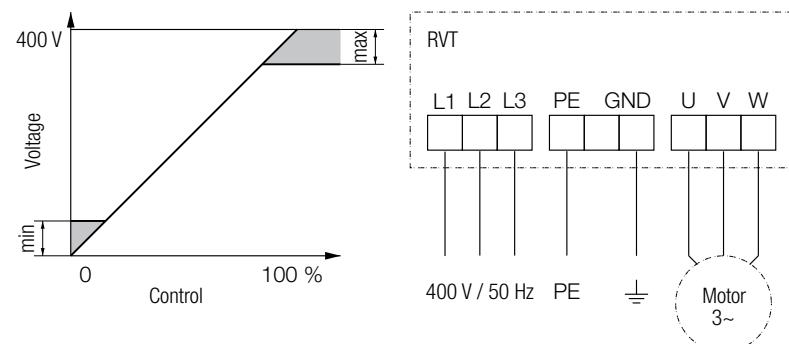

### Technical Data

	Article number	Nominal voltage V	Max. current A	Frequency Hz	Protection class	Temperature range °C	Fuse	a mm	b mm	c mm

## Star-delta switch

Enclosed selector for star-delta motor configuration for three-phase motors.

### Execution

Insulated polycarbonate module, IP66 protection degree, front mounting, silver front panel, 60° switching angle, terminals accessible both from mounting direction or laterally, data rated according to IEC 60947.

### Function

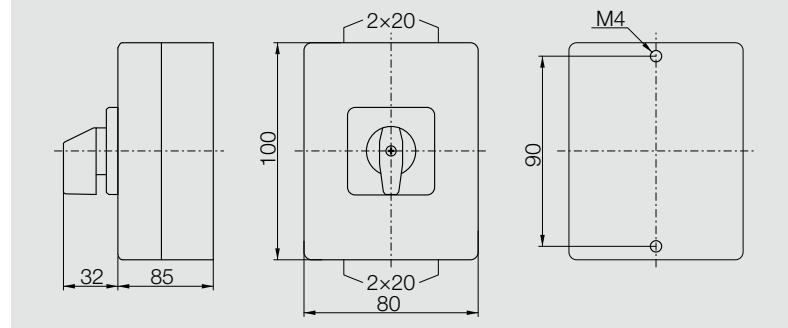

A 3-position changeover switch for 0 = Motor OFF, Y = STAR motor configuration, Δ = DELTA motor configuration. It must be installed between the 3-phase power supply (L1, L2, L3) and a 3-phase controllable motors, having the STAR-DELTA terminals externally available (U1, V1, W1 and U2, V2, W2 respectively). It provides a safe way to switch between the STAR and DELTA motor configurations, changing, in this way, between the high (DELTA) and low (STAR) motor speed.

**The switch can't be used as STAR/DELTA motor starter!**

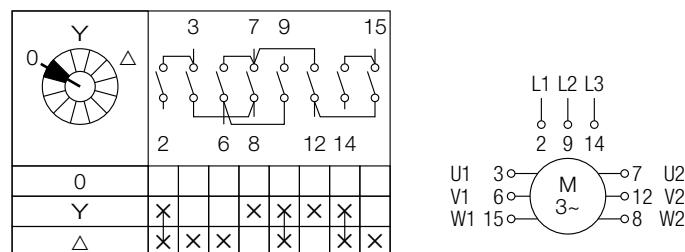

### Technical Data

# Description

## Safety

These fans are intended to be incorporated into finished products for the treatment of clean and filtered air, free of dust, particles, shavings, grease, etc., within the rated ranges of temperature and electrical supply.

The design of the installation shall guarantee the essential safety requirements, as specified by the locally enforceable legislation, including safety against human contact with moving parts, e.g. by application of the design principles stated in EN ISO 12100.

When the inlet and/or outlet of a fan are connected to a ducting system, or to a closed plenum, including integral filters or grids, these may be designed also to provide the specified protection level.

Otherwise, the fan must be protected by fitting appropriate inlet or outlet guards, designed in accordance with EN ISO 13857, available from Nicotra Gebhardt as accessories or options.

## Type code

		1V	2P	2V	FL	SCT	SP	SB	GRG	GRGP
1F	4P	3V								
3F	6P	4V								
Single phase	2-pole	1-Speed	Outlet flange	Terminal box	Special version	Mounting Feet	Inlet guard	Outlet guard		
Three phase	4-pole	2-Speeds								
	6-pole	3-Speeds								
		4-Speeds								

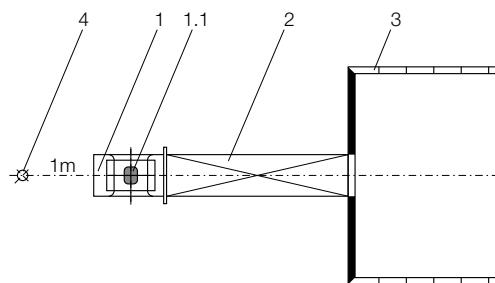

## Performance data

Air performance ratings shown in this catalogue have been derived from performance tests made with installation type "B", with free inlet and ducted outlet.

The performance data shall be obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

Ratings are referred to the standard air density of  $\rho_1 = 1.2 \text{ kg/m}^3$  at the fan inlet.

## Sound

- 1 = Fan
- 1.1 = Motor
- 2 = duct on discharge
- 3 = Chamber
- 4 = Microphone position

In the diagrams, the A-weighted housing and free inlet sound power level  $L_{WA7}$  is given as the emission parameter for the ventilator.

The A-weighted noise level  $L_{PA7}$  for a distance of 1 m (see sketch) is achieved approximately in that the correction value given below is subtracted from the respective A sound power level.

It should be noted that site acoustics, duct design, reverberation, natural frequencies etc. can all influence noise to a greater or a lesser extent.

$$L_{PA7} \approx L_{WA7} - dL$$

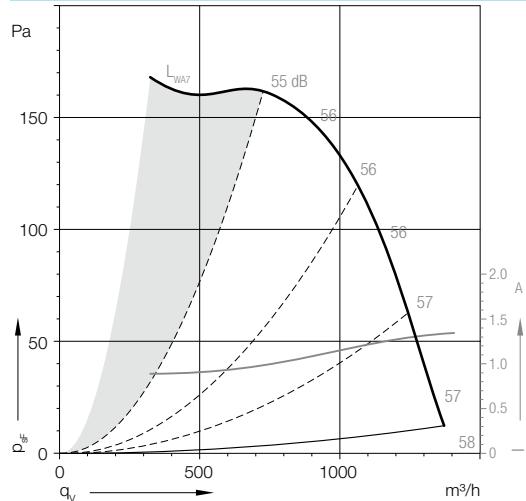

### Correction values $dL$ :

Size  $\leq 10/10$ :  $dL = 11 \text{ dB}$

Size  $\geq 12/9$ :  $dL = 13 \text{ dB}$

# Description

## Fan operating area

For a proper fan selection the duty point in the grey area to the left of the leftmost dashed parabolic line drawn on each performance diagram should preferably be avoided. In this area the fan stall is producing fluctuating pressure and fluctuating loads on the fan and motor; some single-phase motors may also be overheating in this low-load condition.

When the performance curves of a fan are cut to the right with continuous-line parabola, a fan selection with the duty point located below of this parabola shall be carefully avoided, because the drive motor would be overloaded and would be overheating. Such an operating condition may be evidenced by a motor input current exceeding the maximum rated value.

## Fan lifespan

The high level of manufacturing technology and the use of selected materials provide a considerable fan operating lifetime.

In most applications, the fan components more subjected to wear are the motor bearings.

The bearings are sized to reach, using 80 % of the maximum allowed current and working at an air temperature not higher than 40 °C, a  $L_{10h}$  operating life of 20,000 hours. This means a 7 years fan lifetime, for fans running 8 hours a day.

## Media

This range of fans are specially designed for use into air handling units (AHU) and ventilation systems.

The centrifugal fans are ideal for conveying clean air. The allowed air temperature comes from -20 °C to +40 °C.

## Motors

Most motors have "F" ISO insulation class but some of the smaller models have nevertheless "B" ISO insulation class.

Motors could have IP32; IP44; IP54 or IP55 protection class (closed frame) or IP10; IP20 protection class (open frame).

Detailed information for each fan model are provided with fan specification on the product pages.

## Motor protection

All standard production motors are equipped with an integrated thermal overload protectors (TOP), as protection against thermal overload.

TOP may be wired internally to windings and then they'll automatically stop the motor, if a overheating event occurs, and start the motor again once it is cooled down.

TOP may alternatively be externally wired, that means TOP terminals are available to the user in the motor terminal block or terminal box.

In this case, the TOP terminals can be manually connected in series between power supply and motor windings or, alternatively, to an external device that switches off the mains to prevent that the motor be damaged by an overheating conditions.

# Description

## Speed regulation generally

All standard production motors can always be used with transformers or devices which do not modify the sinusoidal wave line to change the fan speed is always allowed.

### Speed regulation for fans equipped with single-phase motors

Single or multiple speed available. Single phase motors are generally suitable for speed regulation by changing the input voltage with our electronic single-phase RVM speed regulators (see chapter "Options/Accessories" for further information).

The speed variable types are marked with an dot in the technical data tables.

The reduced – voltage curves shown in the catalogue may be obtained by either using transformers or our RVM regulators. In the last case, we have commonly used a 2-wires connection for running currents up to 3 Ampere max and a 3-wires connection for higher running currents.

Speed regulation of multi-speed fans is obtained by connecting the mains to the correct motor terminals according to the wiring diagram supplied with each fan.

### Speed regulation for fans equipped with three-phase motors

Single or double speed available. Performance diagrams of single speed fans usually shows only the curve referred to a 230 V star – 400 V delta configuration.

Performance diagrams of double speed fans usually shows the curves referred to a 400 V star (high speed) – 400 V delta (low speed) configurations.

The use of RVT controllers or inverter is only acceptable with special motors equipped with a reinforced insulation of the windings. In this case, these devices shall be in accordance with the requirements of IEC/TS 60034-17:2006.

# Accessories

## Frequency converter

### Design

Frequency inverter with variable output voltage and frequency, specially designed for the operation of centrifugal fans with induction motors. Due to the use of modern power semiconductors it is possible to achieve a speed of revolution with high efficiency. Switching frequencies up to 16 kHz can be set with all types. If the highest switching frequencies are required (for example for reasons of noise reduction), the maximum output current is decreased, in which case the performance category should be specially checked.

**The overall package includes the frequency inverter, filter for class B (for residential and commercial uses) as well as a control unit.**

### General Performance characteristics

Motor protection feature for motors with thermistor temperature sensors, adjustable acceleration and deacceleration ramps, minimum and maximum rotation speeds, fixed rotation speeds, trapping switch during operation, programmable inputs and PI-controller (MM420 and MM430 only), RS485 serial interface as well as a detailed operating instructions. Caution about combination with isolators (ESH)! Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

### Performance range G110 1AC 230V (for single-phase AC supply)

0.25 kW to 2.2 kW rated motor power, 200 V to 240 V 10 % single-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×230 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +40 °C.

### Performance range MM420 3AC 400V (for three-phase AC supply)

0.55 kW to 11 kW rated motor power, 380 V to 480 V 10 % three-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×400 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +50 °C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (residential and commercial uses) is integrated into the package as substructure option. Power choke to comply with EN 61000-3-2 as additional component.

**Observe performance reduction when using high clock frequencies!**

### Performance range MM430 3AC 400V

(for three-phase AC supply)

15 kW to 250 kW rated motor power, 380 V to 480 V 10 % three-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×400 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +50 °C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (industrial applications) is partially integrated. In order to attain EMC requirements Class B a frequency inverter without filter should be selected. The appropriate EMC-B filter is then required as an additional component.

**Observe performance reduction when using high clock frequencies!**

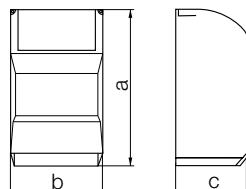

The indicated ratings of the units are made for a quick selection. The exact dedication of an inverter in this catalogue is made by taking into account of the max. admitted current at a pulse frequency of 4 kHz. It is important to know that at higher pulse frequencies the supplied current of the inverter will be decreasing, with the possible consequences of having to select a larger inverter unit. Also longer feed lines or additional radio frequency filters may lead to the choice of a larger inverter size.

**The selected frequency inverters (G110 und MM420) are units contains the frequency inverter (as shown in the following tables) with the matching interference suppression filter (Class B) and a control panel. A further component is the line choke which is available as an accessory.** For more information the available frequency inverters are shown in the following tables.

## Motor protection unit

Motor protection unit EUM 33

Motor protection unit for three-phase current motors (standard motors) without thermal contacts.

### Design

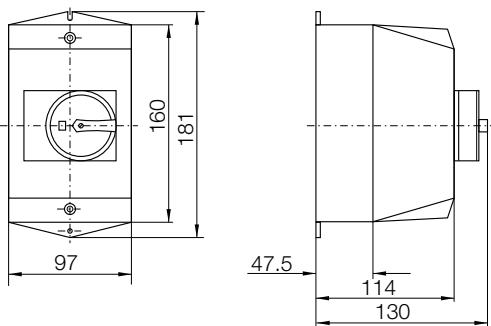

Plastic casing in protection class IP55, permissible ambient temperature +40 °C, 40 Hz up to 60 Hz, frontal operation, for wall mounting. Motor protection unit for singlespeed, non-variable speed three-phase current motors without thermal contacts.

### Function

The motor protection units must be adjusted on site to the trigger current. If the preset trigger current is exceeded, the device disconnects the motor from the mains supply via a thermal overload release. Pressing the "on key" causes the unit to turn on again.

All motor protection units EUM33 are also suitable for the protection of EExe-motors (PTB-Prüfung Gesch-Nr. 3.35/386.3060). They must however be mounted outside of explosion endangered areas, since they are not themselves designed with explosion protection.

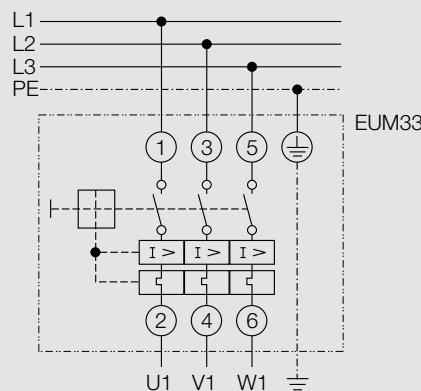

### Dimensions in mm, subject to change.

## Universal control device

Universal control device for installation in control cabinets Digital control module for controlling pressure, air velocity or volume flow (PI controller). For example, a transformer for fans is controlled via the 0...10 V output. The device is designed for installation in control cabinets.

### Type

Multi functional LC-display for actual and nominal values (m/s, hPa = mbar, 100 m<sup>3</sup>/h). Menuassisted adjustment via three function keys.

Actual value input 0...10 V e. g. for:

- ▶ air speed sensors Type EIL in measuring ranges from 0...1 m/s and 0...10 m/s e. g. for:  
- Air velocity control in clean room technology.
- ▶ Pressure sensors Type EIP in measurement ranges 50Pa up to 4000Pa e. g. for:  
- Pressure control in canal systems of air conditioning systems (VVS) or  
- Flow control in centrifugal fans with pressure tappings in the inlet cone. The control module calculates the required flow (m<sup>3</sup>/h) from the differential measured pressure between the surrounding level and inlet cone, maximum volume flow 65536 m<sup>3</sup>/h.
- ▶ Output 0...10 V e. g. for controlling a transformer.
- ▶ Failure message is output via display (internal/external) and relay programmable.
- ▶ External set value specification via potentiometer or 0...10 V signal.
- ▶ Specification of two set values (day/night), can be switched over externally or via keyboard.
- ▶ Protection against unauthorised setting by keyboard code.

### Application area

▶ Pressure regulation for centralised ventilation systems and variable volume flow systems for building air conditioning (VVS) e.g. in combination with a frequency inverter or a commutation unit or a transformer and a pressure sensor

▶ Volume flow regulation for centrifugal fans (with measuring stub in the inlet cone) e.g. in combination with a frequency inverter or a commutation unit or a transformer or a mini-interface inverter and a pressure sensor and the volume flow volumeter. Maximum volume flow 65536 m<sup>3</sup>/h.

▶ Air speed regulation for clean room systems, e.g. in combination with a transformer and an air speed sensor

### Electrical connection and installation

Connection to 230 V, 50/60 Hz. The control module can be installed in a control cabinet door. Admissible relative humidity: 85 %, noncondensing. Power supply for the sensors included:

+24 V, 20 %, I<sub>max</sub> = 70 mA.

#### Setting options

- ▶ Set values in the measurement range of the sensor (m/s, hPa = mbar), or in the volume flow range of the fan (x100 m<sup>3</sup>/h)
- ▶ Switch over of set value (day/night)
- ▶ Min./max. setting range
- ▶ Translation of performance curve (P component)
- ▶ Constant of integration can be selected (I component)
- ▶ Reversal of the effect of the control behaviour
- ▶ Rotation of the performance curve
- ▶ Switchover or programming of internal/external set value
- ▶ Sensor selection via keypad
- ▶ Programming for "Filter fault"
- ▶ Keypad code
- ▶ K factor entry (The K-factor can be found in the current lists of our fan line)

## Differential pressure sensor

Differential pressure sensor with membrane for measuring the pressure, negative pressure or differential pressure of nonaggressive gases.

### Type

The differential pressure to be measured acts transformed into an output signal of 0...10 V by electronics (in SMD technology).

### Application ranges

Volume flow regulators in centrifugal fans (with volume flow measuring device IMV) in connection with a frequency inverter type G110, MM420, MM430, or a universal regulator appliance type ERA 02-4000-5E in connection with a frequency regulator.

### Electrical connection and installation

The differential pressure sensor delivers a starting signal (0...10 V) by pressure increase at the "Plus" connection opposite pressure on the "Minus" connection.

#### Voltage supply

- 15...30 V DC or 24 V AC, 15 %

- Pressure connections must point downward, tube connection Ø5mm

#### Measuring accuracy

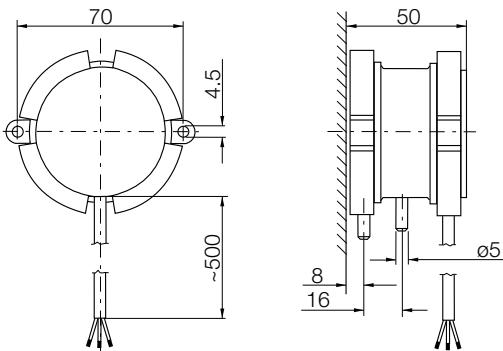

- Null drift: 0.75 %

- Sum of linearity and hysteresis: 1 %

- Temperature drift zero point: 0.3 %/10 K

- Temperature drift length of measurement: 0.2 %/10 K

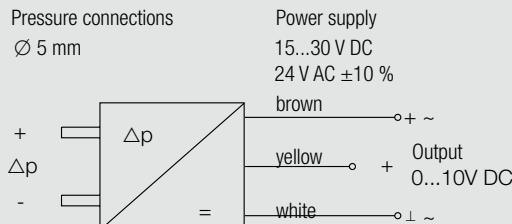

### Dimensions in mm, subject to change.

## Isolator ESH 21

Isolator  
ESH 21 (≤3 kW)Isolator  
ESH 21 (≥5.5 kW)

The isolators are grouped according to motor rated power.  
All important characteristic data are evident from the model designation. E.g.: **ESH 21-0030-65**  
= 3 kW switch - 6 main contacts - 5 auxiliary contacts

### Design

Beautifully shaped, shock-resistant plastic casing. Protection class IP44/IP65, for surface mounting, switching symbols 0 and I. The isolator is fitted with connection terminals that are very accessible and has a connection diagram glued in the casing.

The **ESH21 up to 3 kW** is designed to IP44. It is equipped with an integrated locking mechanism.

The **ESH21 up to 5.5 kW** is designed to IP65. It is equipped with a coupling cover and an integrated locking mechanism. A padlock can in some cases be fitted to the rotary switch.

### Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

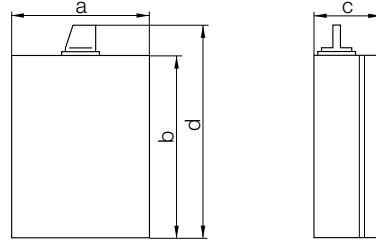

**All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).**

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the pre-switched control device does not drop out during cleaning or servicing work due to motor.

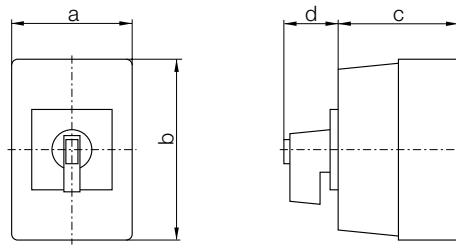

Caution about combination with frequency inverter!

Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

### Dimensions in mm, subject to change.

## Isolator ESH 22

### Design

Shock-resistant metal casing, black switch with symbols 0 and I. Protection class IP65 or IP54, for surface mounting (see determination in the tabular).

The isolator is fitted with connection terminals that are very accessible and has a connection diagram glued in the casing.

All isolators are equipped with a coupling cover and an integrated locking mechanism. In some cases a padlock can be fitted to the rotary switch.

### Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

**All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).**

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the preswitched control device does not drop out during cleaning or servicing work due to motor.

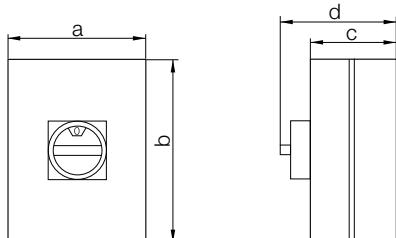

### Use

The isolator ESH22 with metal casing is necessary, if screened components must be used. (e.g. frequency inverters or control engineering devices are used featuring electronic components).

### Attention!

Do not switch during operation, overvoltages can destroy the switch and the motor winding!

**Dimensions** in mm, subject to change.

## Quality management system

### DIN EN ISO 9001

Nicotra Gebhardt quality is the result of a continuous company policy intended to guarantee that our product properties and features are clearly superior to comparable products.

This already established company maxim led in April 1985 to the auditing and certification of the existing quality management system. In the following years it was updated to match the changing international and European standards. Modern production processes, monitored by our quality management system, guarantee a high repeat accuracy in production.

This ongoing high standard of quality permits the establishing of the performance data in classes of accuracy in accordance with DIN 24166.

The narrow tolerances ensure a high level of data reliability for our products.

## Machine Safety

The fans contained in this catalogue are not machines in the sense of the EC Machine Directive. They are delivered with a manufacturer "Declaration of incorporation". The assessment of the dangers associated with the fan and necessary safety measures are based on the VDMA Unit sheet 24167 : Fans; Safety requirements. The operating instructions give which safety measures are still necessary on assembly to ensure that the fans comply with the Machine Directive 2006/42/EC.

## Catalogue data

We reserve the right to change any measurements and technical data in this catalogue in accordance with further development of our products. All information valid at the time of printing.

## Notes

A large grid of empty lined paper for notes. The grid consists of approximately 20 columns and 30 rows of horizontal lines. A light blue header bar is at the top.
